PROFILE

The proposed project is an AI Resume Generator Web Application that helps users create professional resumes quickly and easily. Many students and job seekers face difficulties in designing resumes and writing professional content. This project solves these problems by providing a platform where users can enter their information, select templates, and generate resumes instantly.

EXPERIENCE

2020 - 2026

To develop a web-based AI Resume Generator application that allows users to create, customize, and download professional resumes easily

PROJECTS

Project

event app

In today's competitive job market, a professional resume is very important for getting internships and jobs. Many students and freshers do not know how to create attractive resumes. Existing resume builders are often expensive, difficult to use, or have limited free features. With the growth of online hiring and digital applications, there is a strong need for an easy-to-use resume generator platform that allows users to create resumes quickly without design knowledge.

Project

Expanse app

The application will include features like multiple resume templates, AI-based suggestions, and PDF download options. The project will be developed using the MERN stack (MongoDB, Express.js, React.js, and Node.js). The main goal is to build a simple, fast, and user-friendly resume generator. This project will also improve practical web development skills and provide a useful tool for students and professionals
