PROFILE

Professional YouTube Summary "This authentication middleware secures protected routes by validating the JWT token, retrieving the authenticated user from the database, and attaching that user to the request object. If the token is invalid, expired, or the user does not exist, the middleware blocks access and returns a 401 Unauthorized response." This sounds natural, professional, and suitable for a YouTube tutorial or technical interview explanation.

EXPERIENCE

2020 - 2026

backend devloper

Google

Professional YouTube Summary "This authentication middleware secures protected routes by validating the JWT token, retrieving the authenticated user from the database, and attaching that user to the request object. If the token is invalid, expired, or the user does not exist, the middleware blocks access and returns a 401 Unauthorized response."
